1  
Your blind box should contain a main cassette, two side rails and one bag of screws.

2  
Firstly you need to clean the window with a dry cloth to remove any dust. If present remove the grey brackets from the top of the sash.

3  
Remove the backing paper from the adhesive strip on the back of the top cassette.

4  
Place the cassette in the top of the sash with the adhesive strip in contact with the timber. Hold firmly for 5 seconds to enable the strip to bond to the timber.

5  
Screw one of the supplied screws into either side of the cassette through the plastic brackets. DO NOT use a powered screwdriver, as it could damage the fabric.

6  
Lock in the side rails to the main cassette making sure the fabric on either end is in the side rail groove. Attach the screws through the predrilled holes on the side rails.

7  
Tilt the handle in towards the glass and then push the handle up or down.

8  
When you have moved to the position you want, move the handle towards you to lock again.
